**Introduction** The brachial plexus passes from the neck to the axilla and supplies the upper limb. It is formed from the ventral rami of the 5th to 8th cervical nerves and the ascending part of the ventral ramus of the 1st thoracic nerve. Branches from the 4th cervical and the 2nd thoracic ventral ramus may contribute.

## **Article - Imaging brachial plexus pathology**

The brachial plexus is a network (plexus) of nerves (formed by the anterior rami of the lower four cervical nerves and first thoracic nerve (C5, C6, C7, C8, and T1). This plexus extends from the spinal cord, through the cervicoaxillary canal in the neck, over the first rib, and into the armpit.

Before it enters the cervicoaxillary canal, the brachial plexus is located within the posterior triangle of the neck. It is a space whose anterior wall is presented with the posterior border of the sternocleidomastoid muscle and the posterior wall is the anterior surface of the trapezius muscle.

A prefixed (high) type of brachial plexus exists in which the fourth cervical nerve contributes a fairly large branch, the dorsal branch of the first thoracic nerve is small, and there is no ascending branch from the second thoracic nerve. A postfixed (low) type of plexus is occasionally encountered in which the branch from the fourth cervical nerve is absent, the dorsal branch of the first thoracic is large, and the second thoracic nerve supplies a branch to the plexus.

## **Brachial & L/S Plexus - StudyBlue**

The brachial plexus is a complex intercommunicating network of nerves formed by spinal nerves C5, C6, C7, C8 and T1. It supplies all sensory innervation to the upper limb and most of the axilla, with the exception of an area of the medial upper arm and axilla, which is supplied by the intercostobrachial nerve T2.

A brachial plexus injury (BPI), also known as brachial plexus lesion, is an injury to the brachial plexus, the network of nerves that conducts signals from the spinal cord to the shoulder, arm and hand. These nerves originate in the fifth, sixth, seventh and eighth cervical (C5-C8), and first thoracic (T1) spinal nerves, and innervate the muscles and skin of the chest, shoulder, arm and hand.
